

Instructions to run the code

- The first step would be extract the folder into your local Machine.
- If you have python setup in your local Machine:
 - Run the following command “python Prediction.py” on terminal.
 - It will ask for a Statement to be verified. Fill in the news you want to get verified and press Enter.
 - Once you hit enter, model will be used to classify the news into one of the categories of “TRUE” and “FALSE”. It will also provide the probability of truth associated with it.
- If you have Anaconda Setup in your local Machine:
 - Open “Prediction.ipynb” in the notebook and run it.
 - It will ask for a Statement to be verified. Fill in the news you want to get verified and press Enter.
 - Once you hit enter, model will be used to classify the news into one of the categories of “TRUE” and “FALSE”. It will also provide the probability of truth associated with it.
